Subtotal	-0.61	-0.51	-0.005	-0.23

Effects on MAJOR VASCULAR EVENTS per mmol/L LDL-C reduction

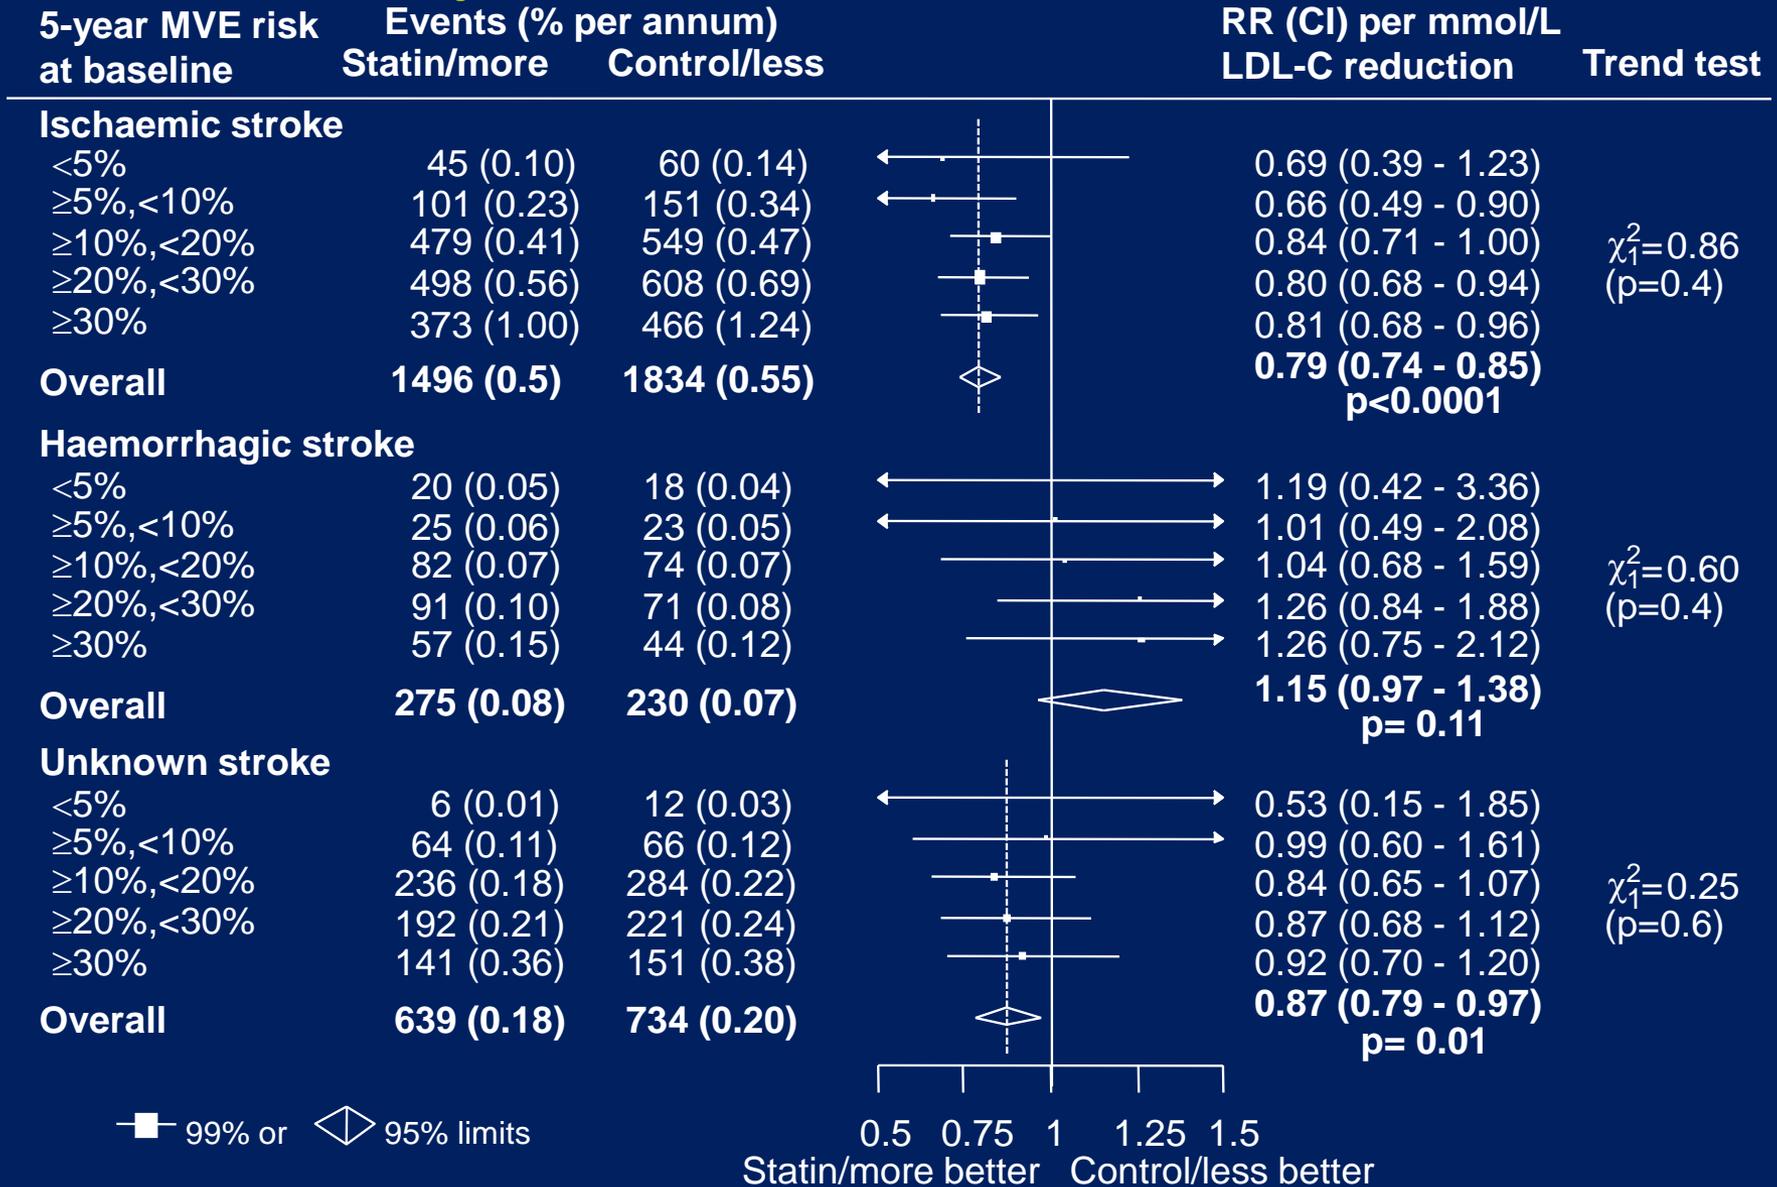

Effects on components of MAJOR VASCULAR EVENT per mmol/L LDL-C reduction

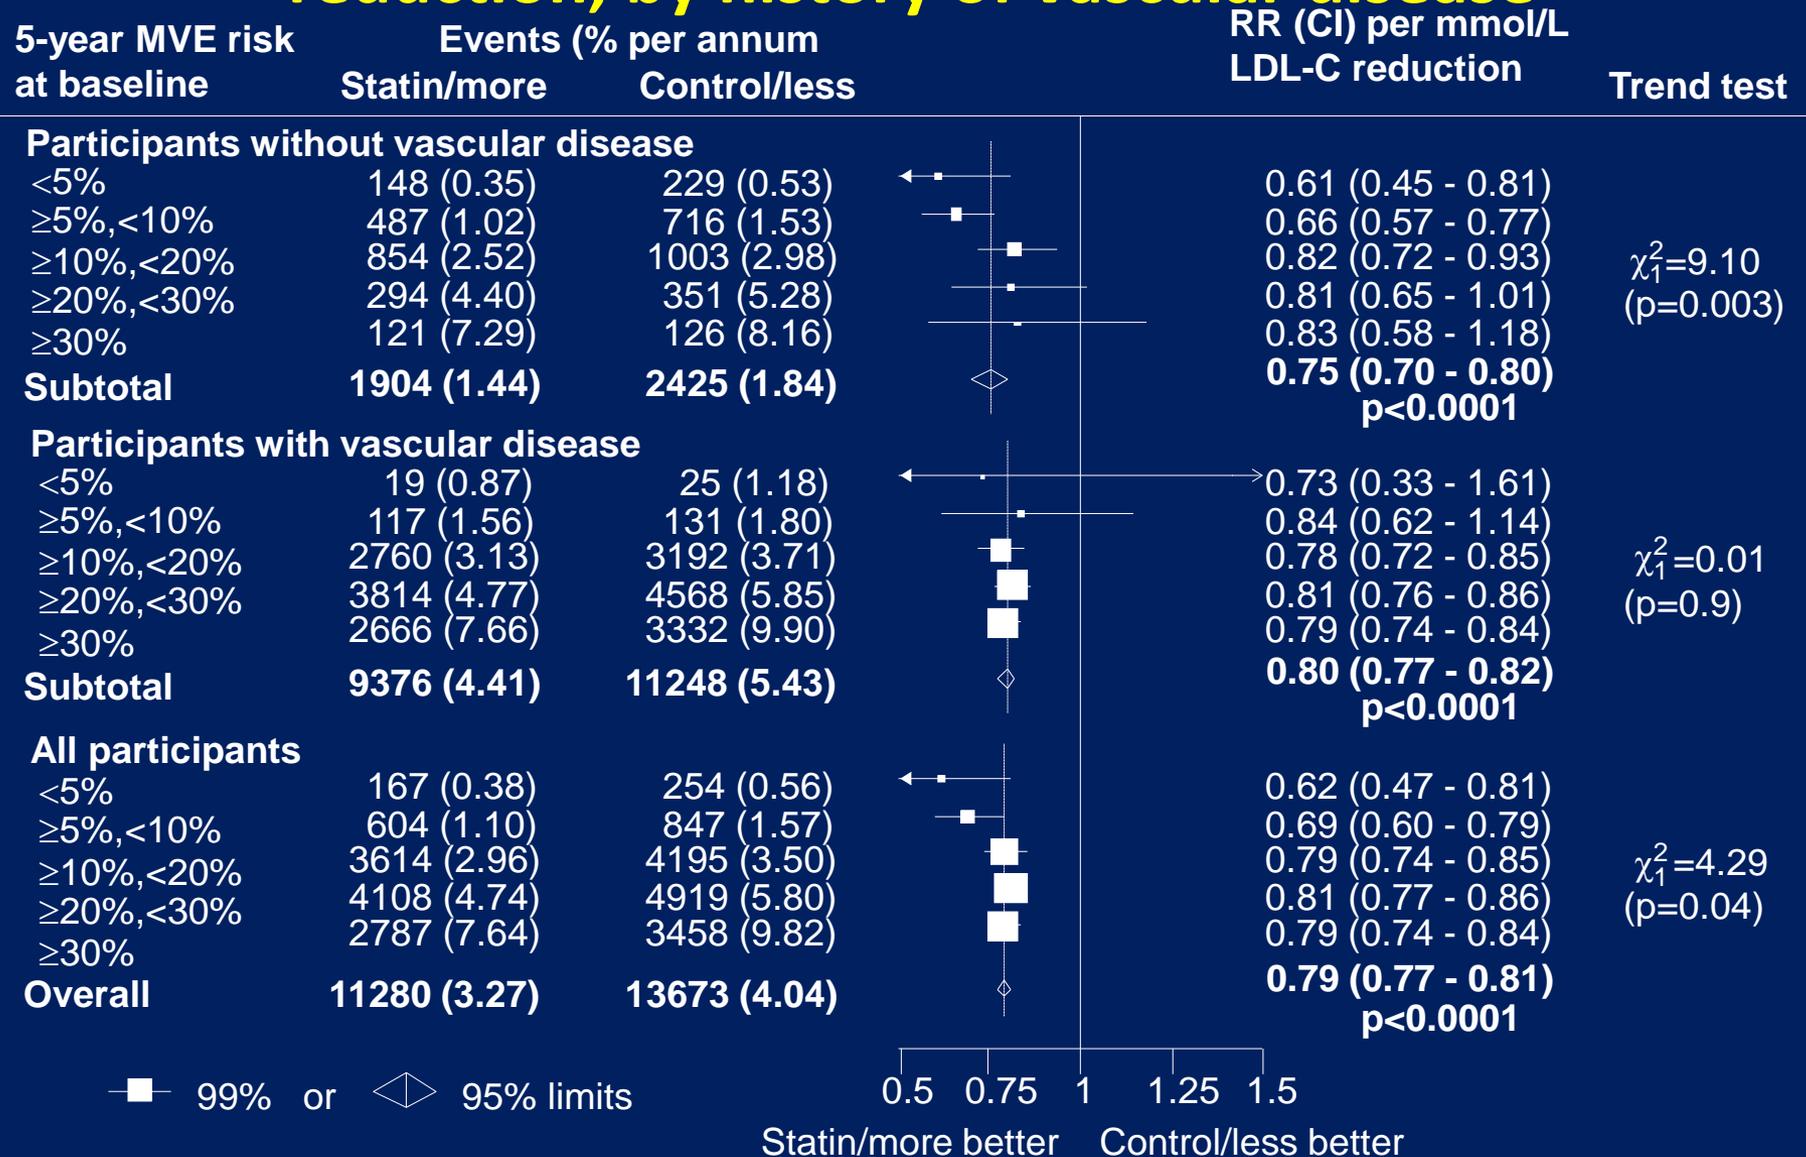

Effects on STROKE SUBTYPES

per mmol/L LDL-C reduction

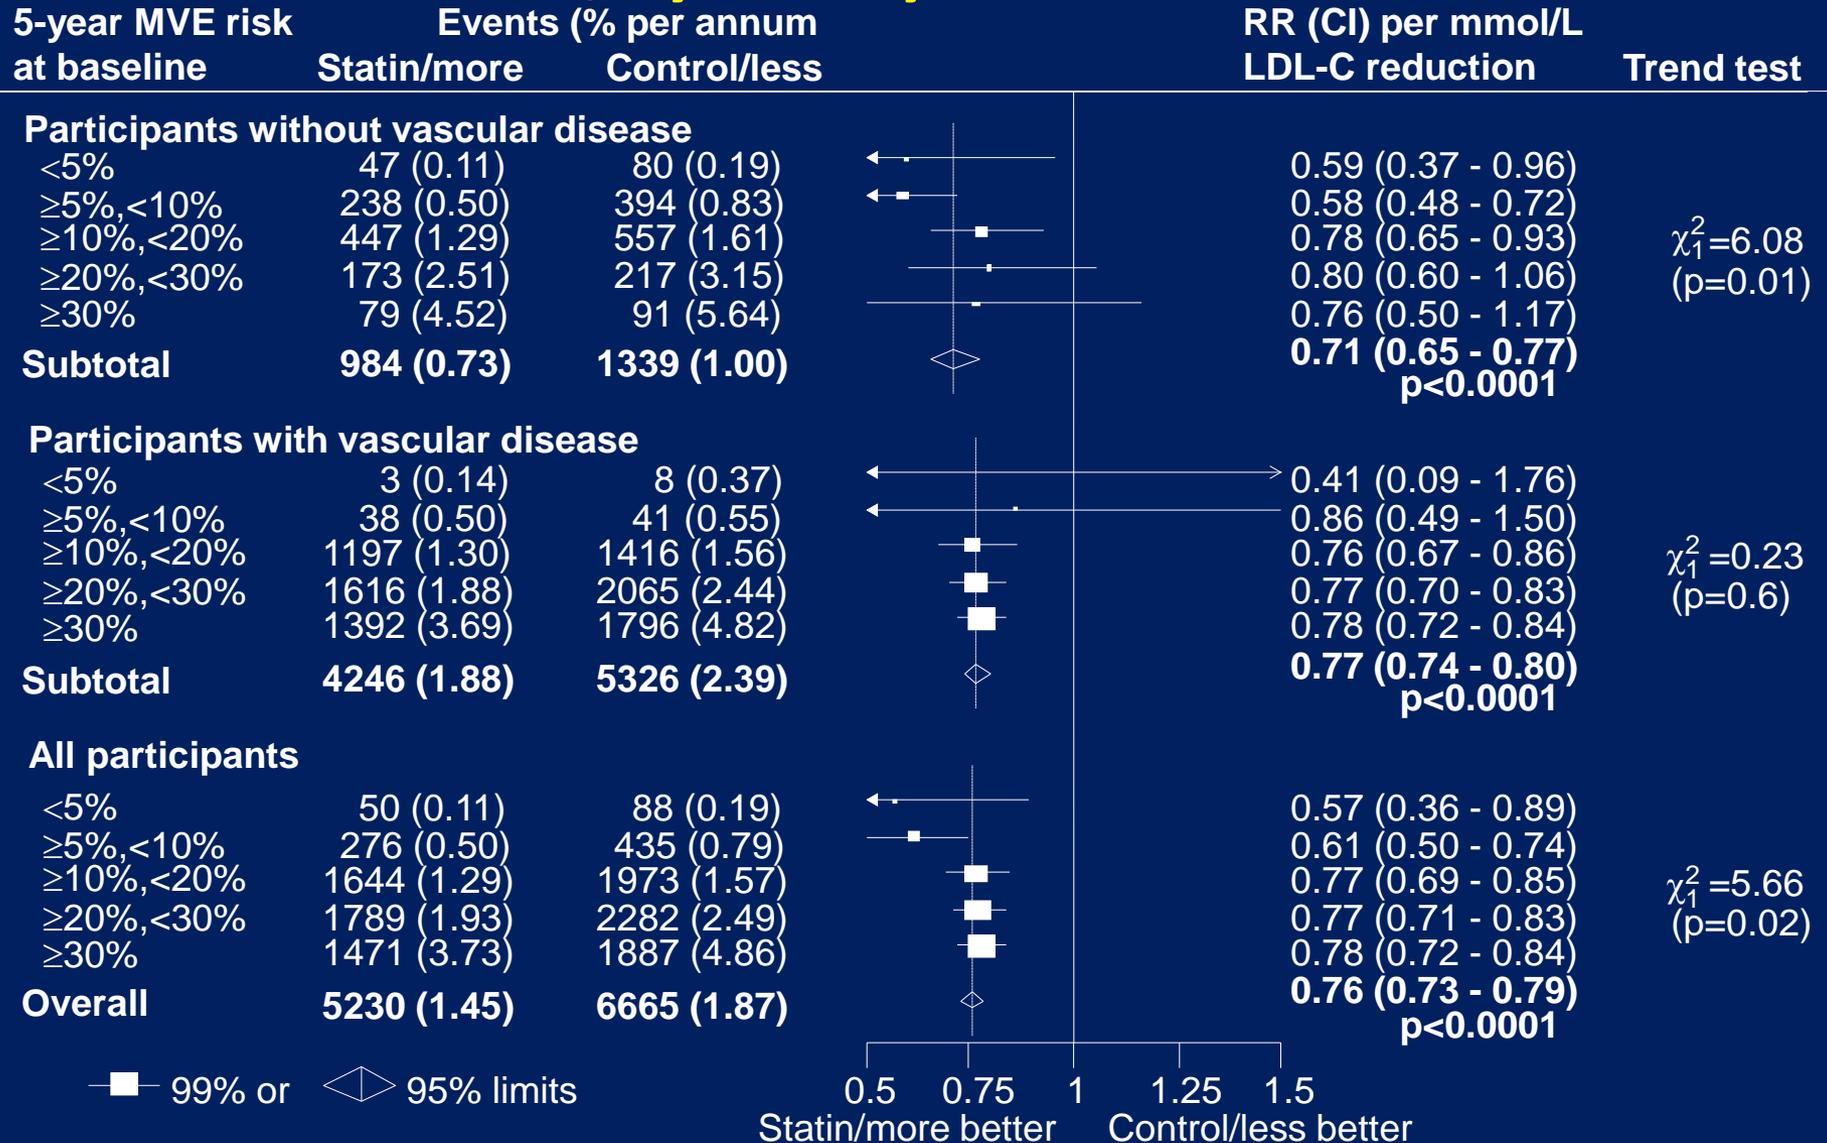

Effects on MAJOR VASCULAR EVENTS per mmol/L LDL-C reduction, by history of vascular disease

Heterogeneity between participants without and with vascular disease: $\chi^2_1=2.74$ (p=0.10)

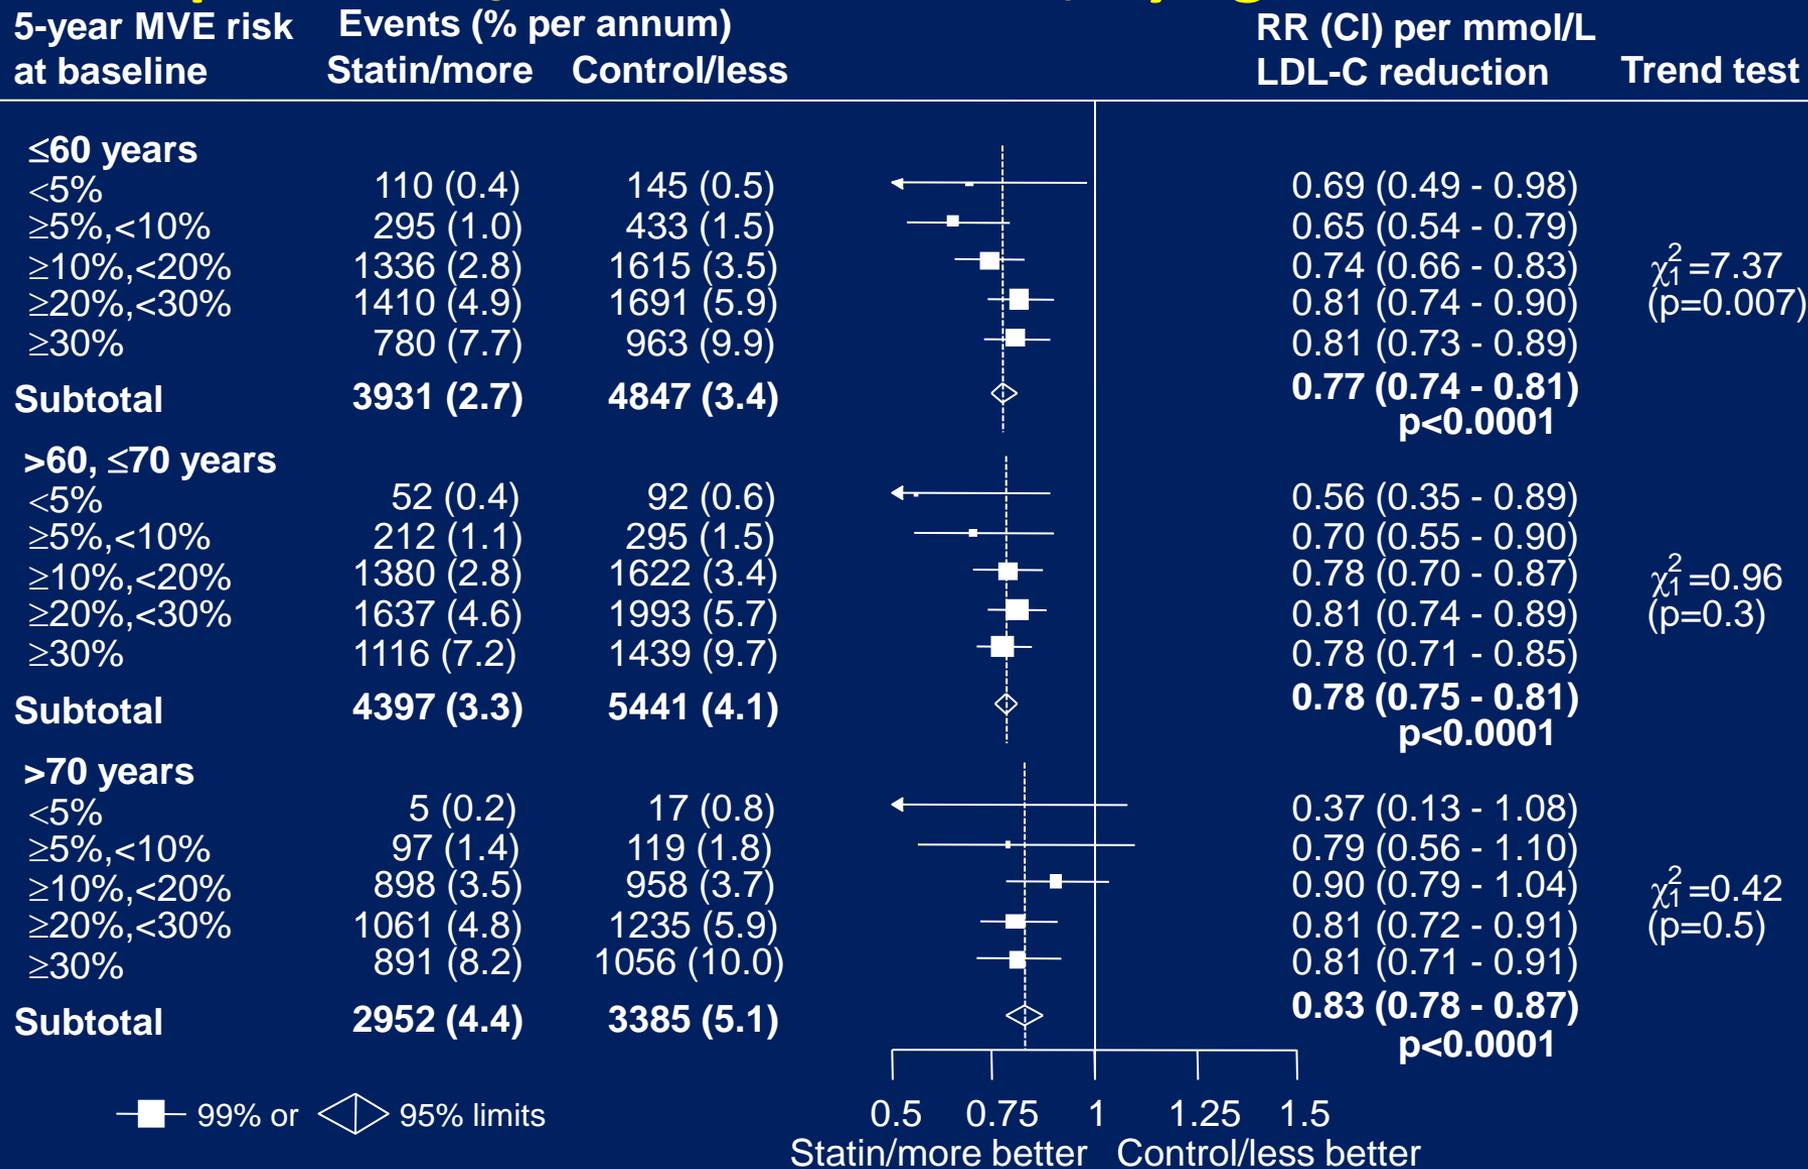

Effects on MAJOR CORONARY EVENTS per mmol/L LDL-C reduction, by history of vascular disease

Heterogeneity between participants without and with vascular disease: $\chi^2_1=2.80$ (p=0.09)

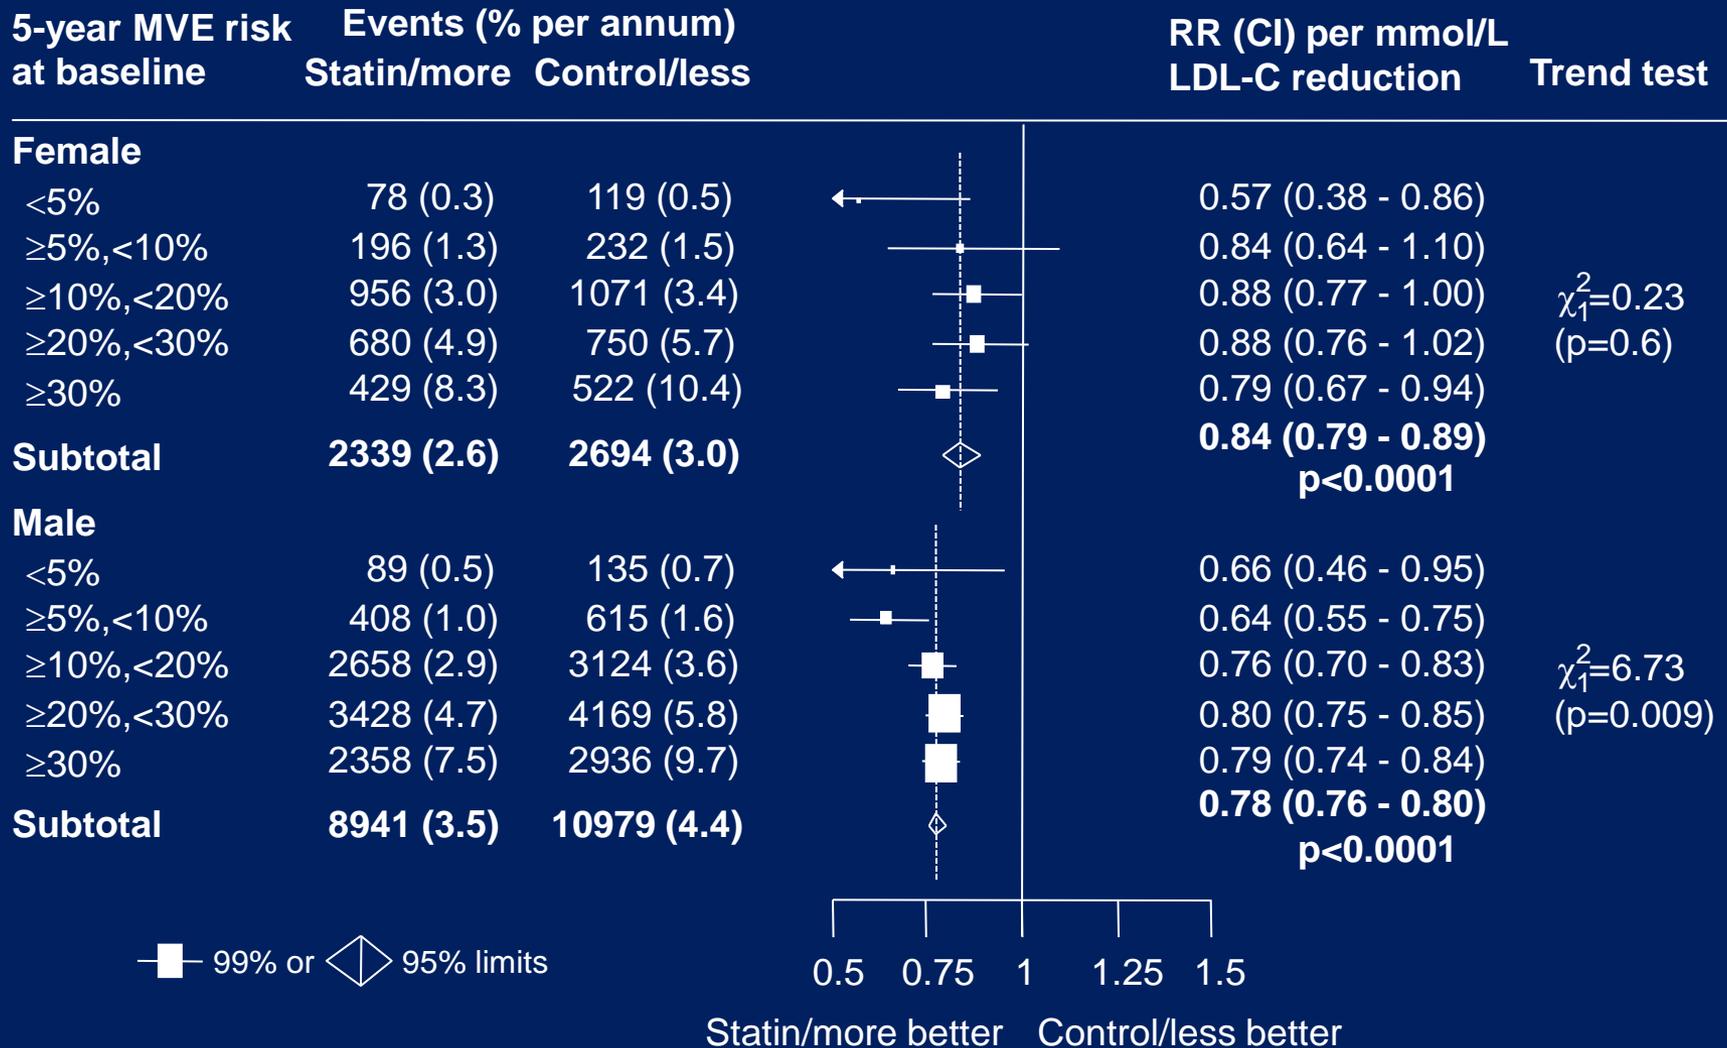

Effects on MAJOR VASCULAR EVENTS

per mmol/L LDL-C reduction, by age at baseline

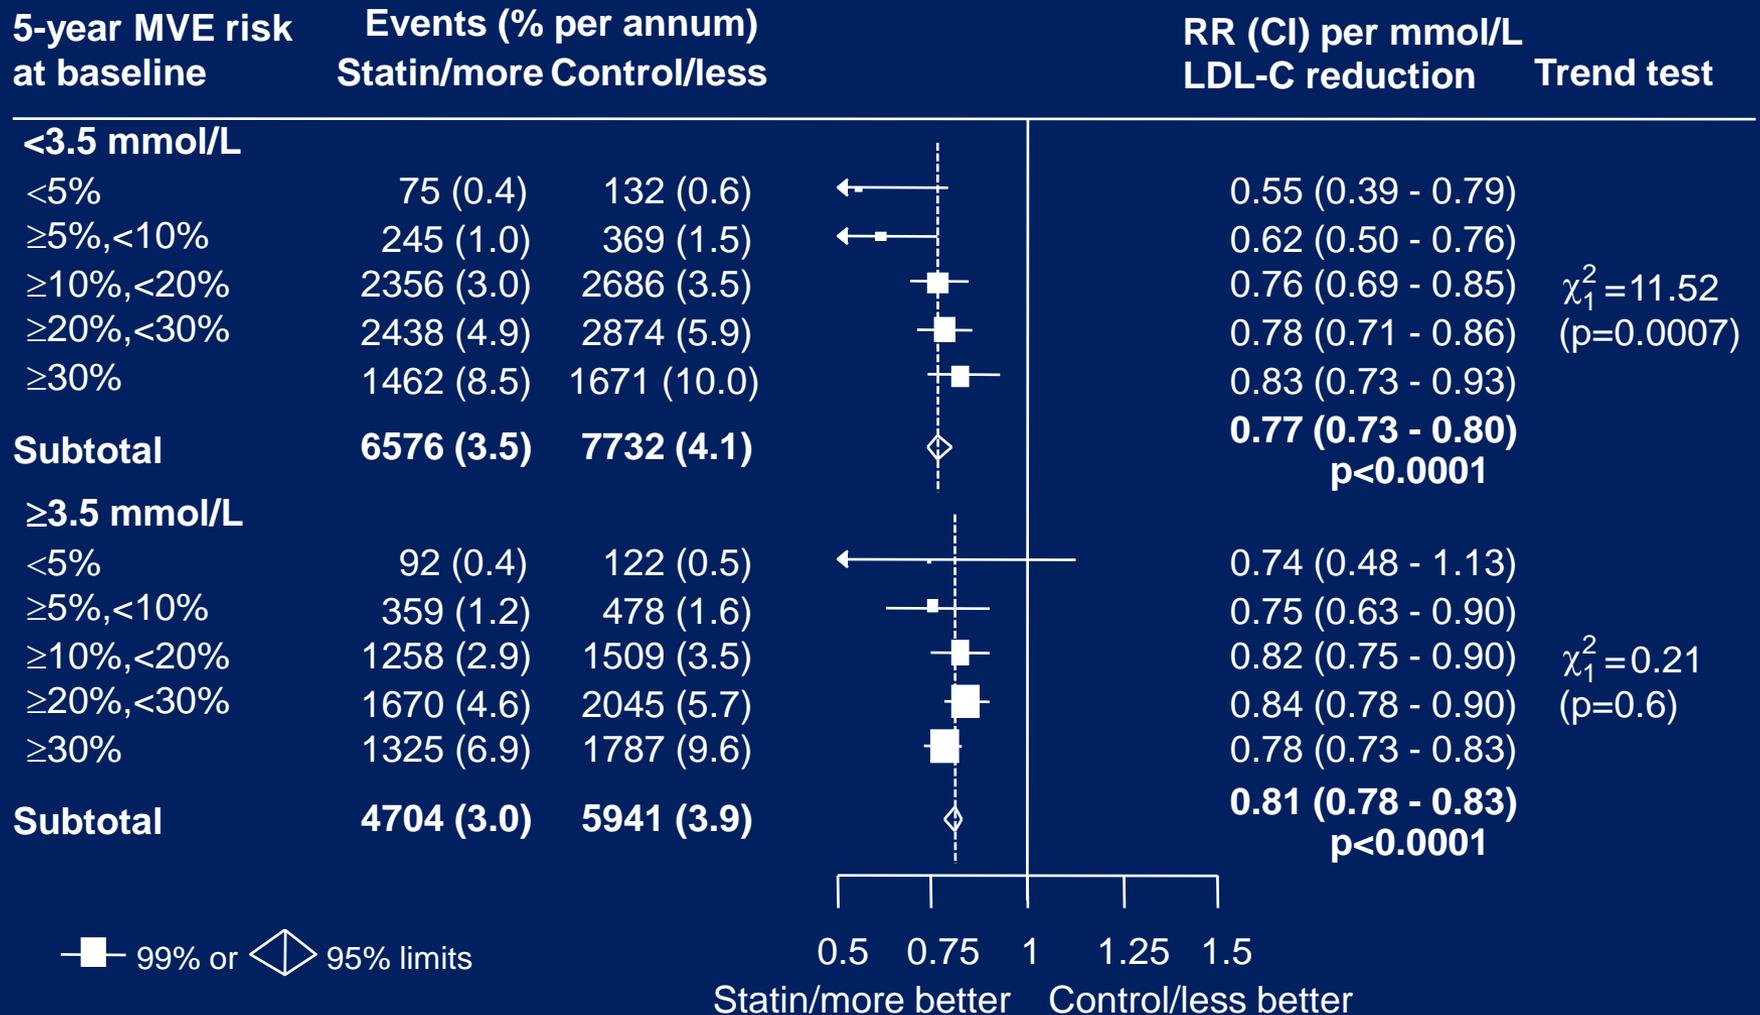

Test for trend across age groups: $\chi^2_1 = 3.29$ (p=0.1)

Effects on MAJOR VASCULAR EVENTS per mmol/L LDL-C reduction, by gender

Heterogeneity between men and women: $\chi^2_1=5.23$ (p=0.02)

Proportional effects on MAJOR VASCULAR EVENTS per mmol/L LDL-C reduction, by baseline LDL cholesterol

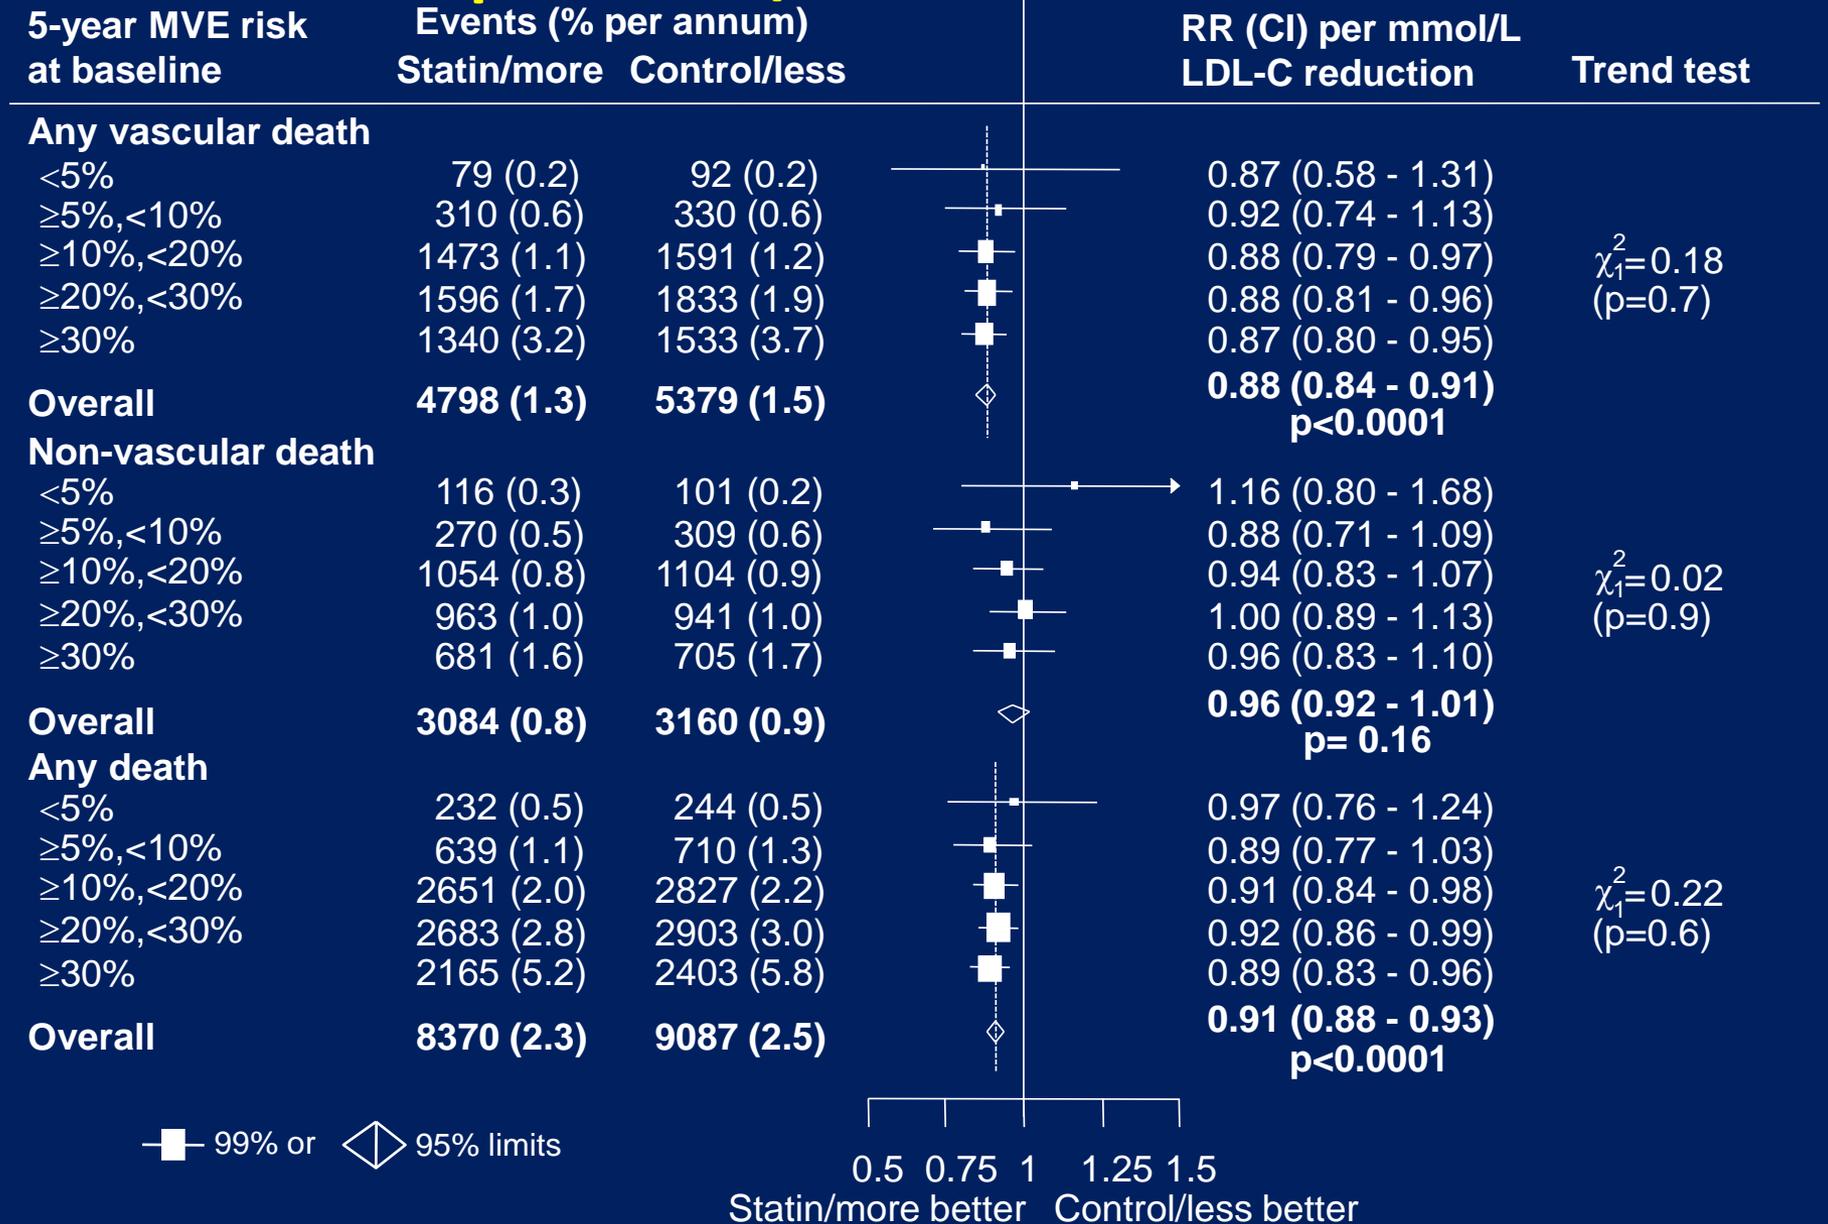

Heterogeneity between participants at different levels of LDL-C at baseline: $\chi^2_1 = 3.26$ (p=0.07)

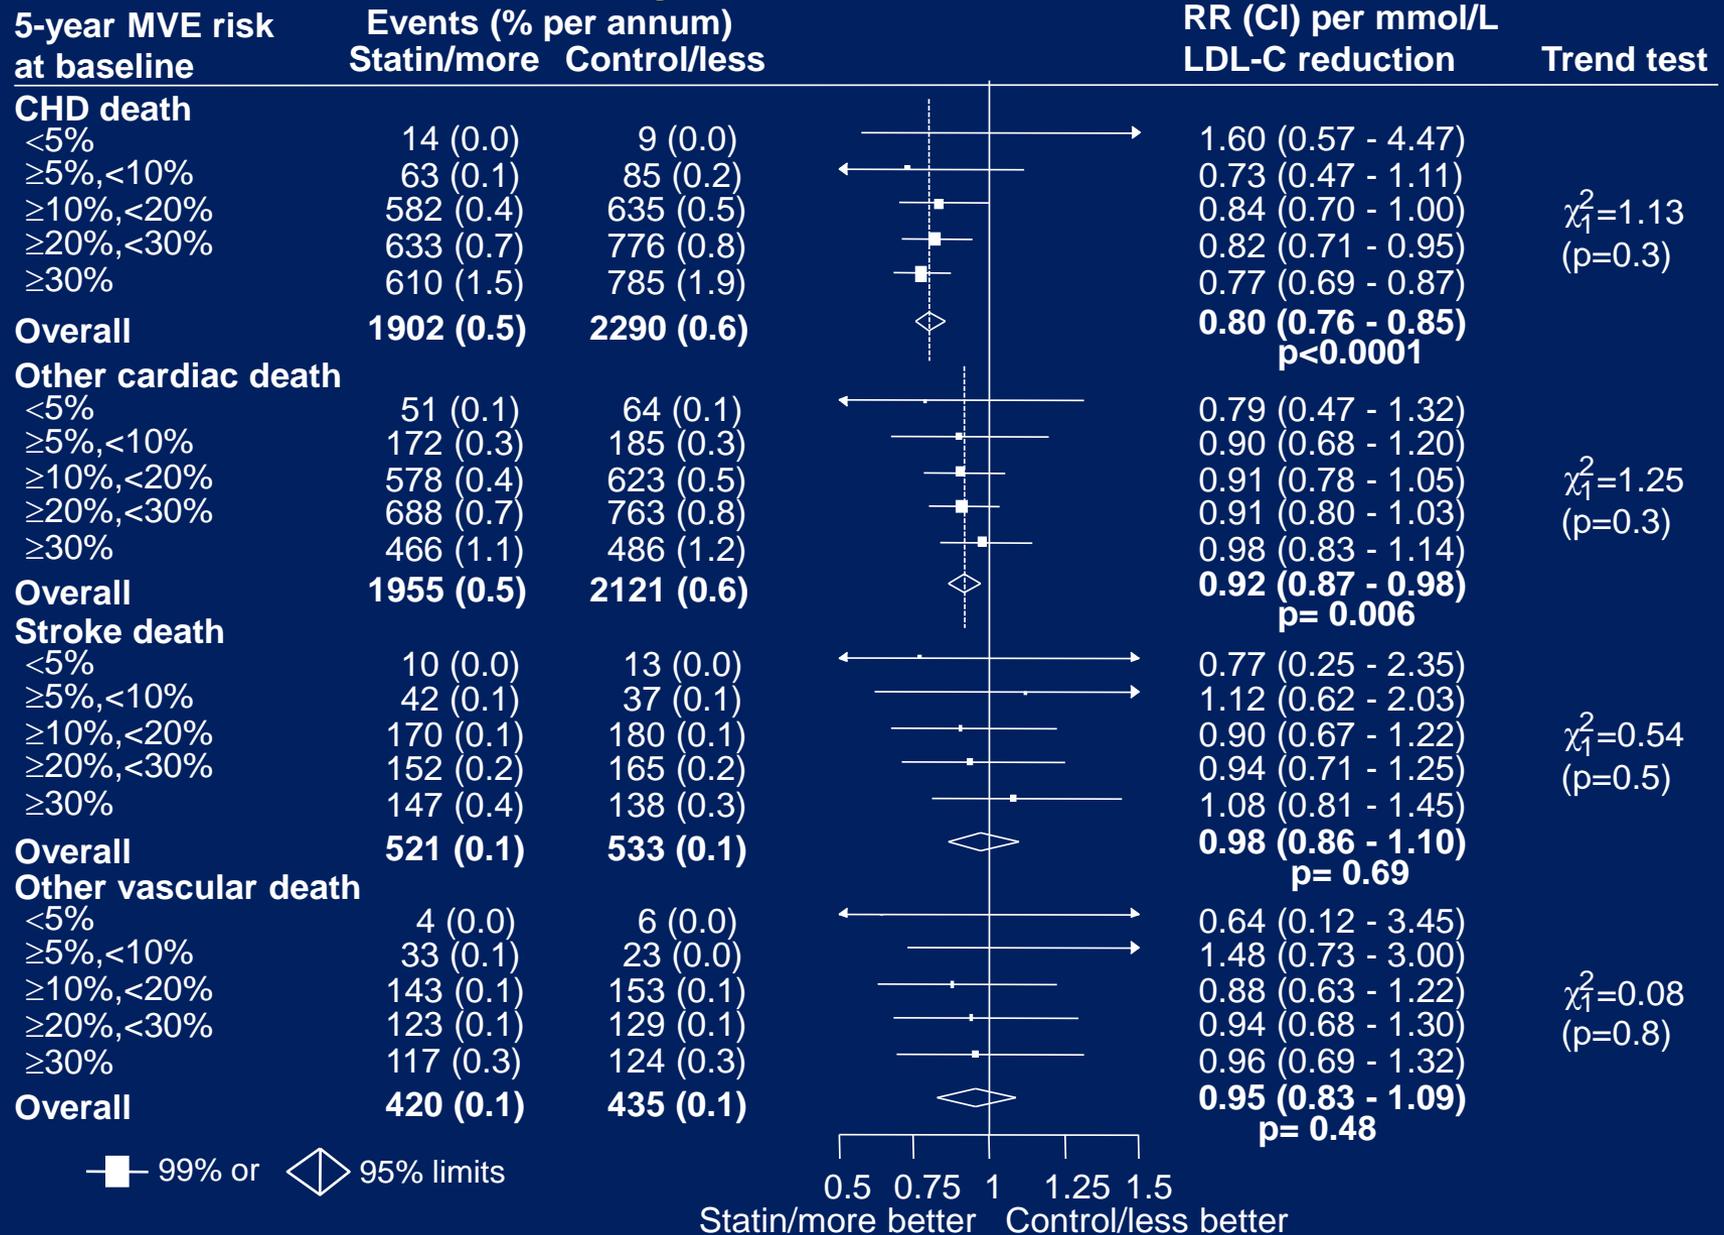

Trial- and LDL-C subgroup-specific LDL weights used in these subgroup analyses.

Effects on CAUSE-SPECIFIC MORTALITY

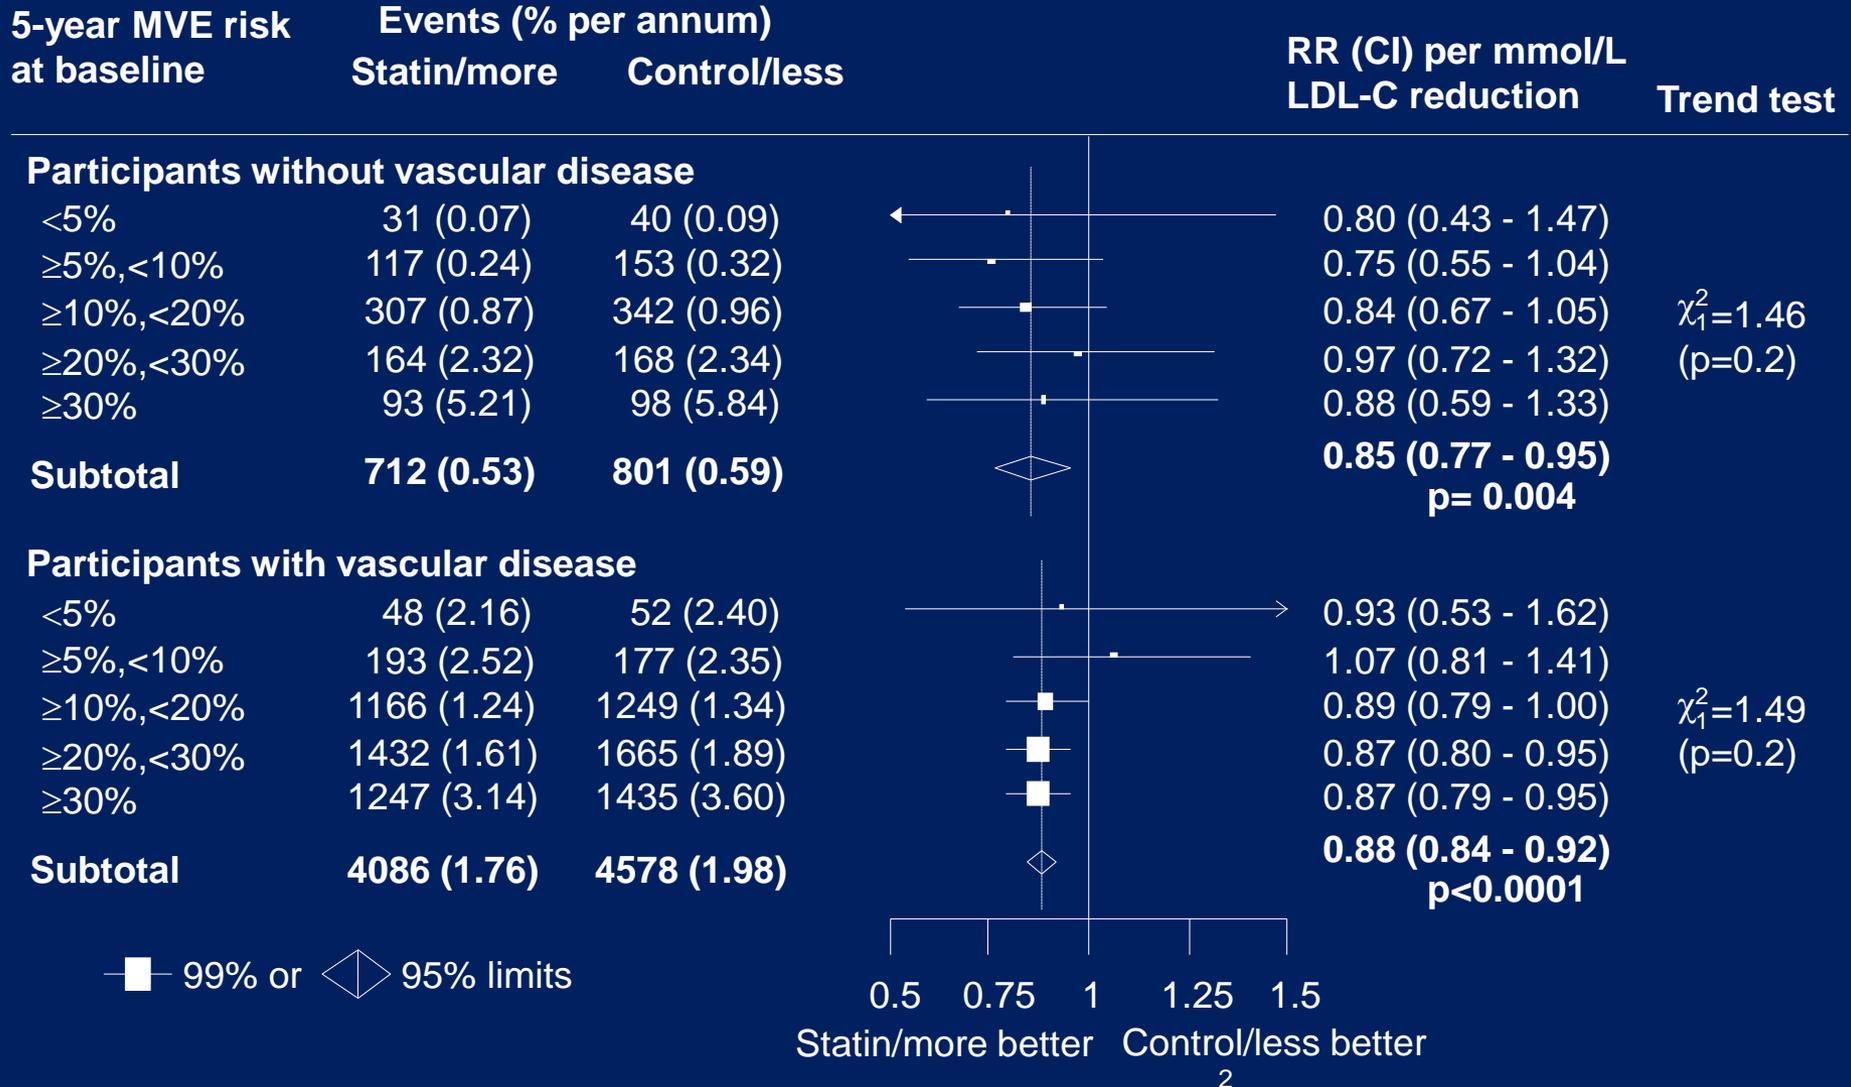

per mmol/L LDL-C reduction

Effects on components of VASCULAR MORTALITY per mmol/L LDL-C reduction

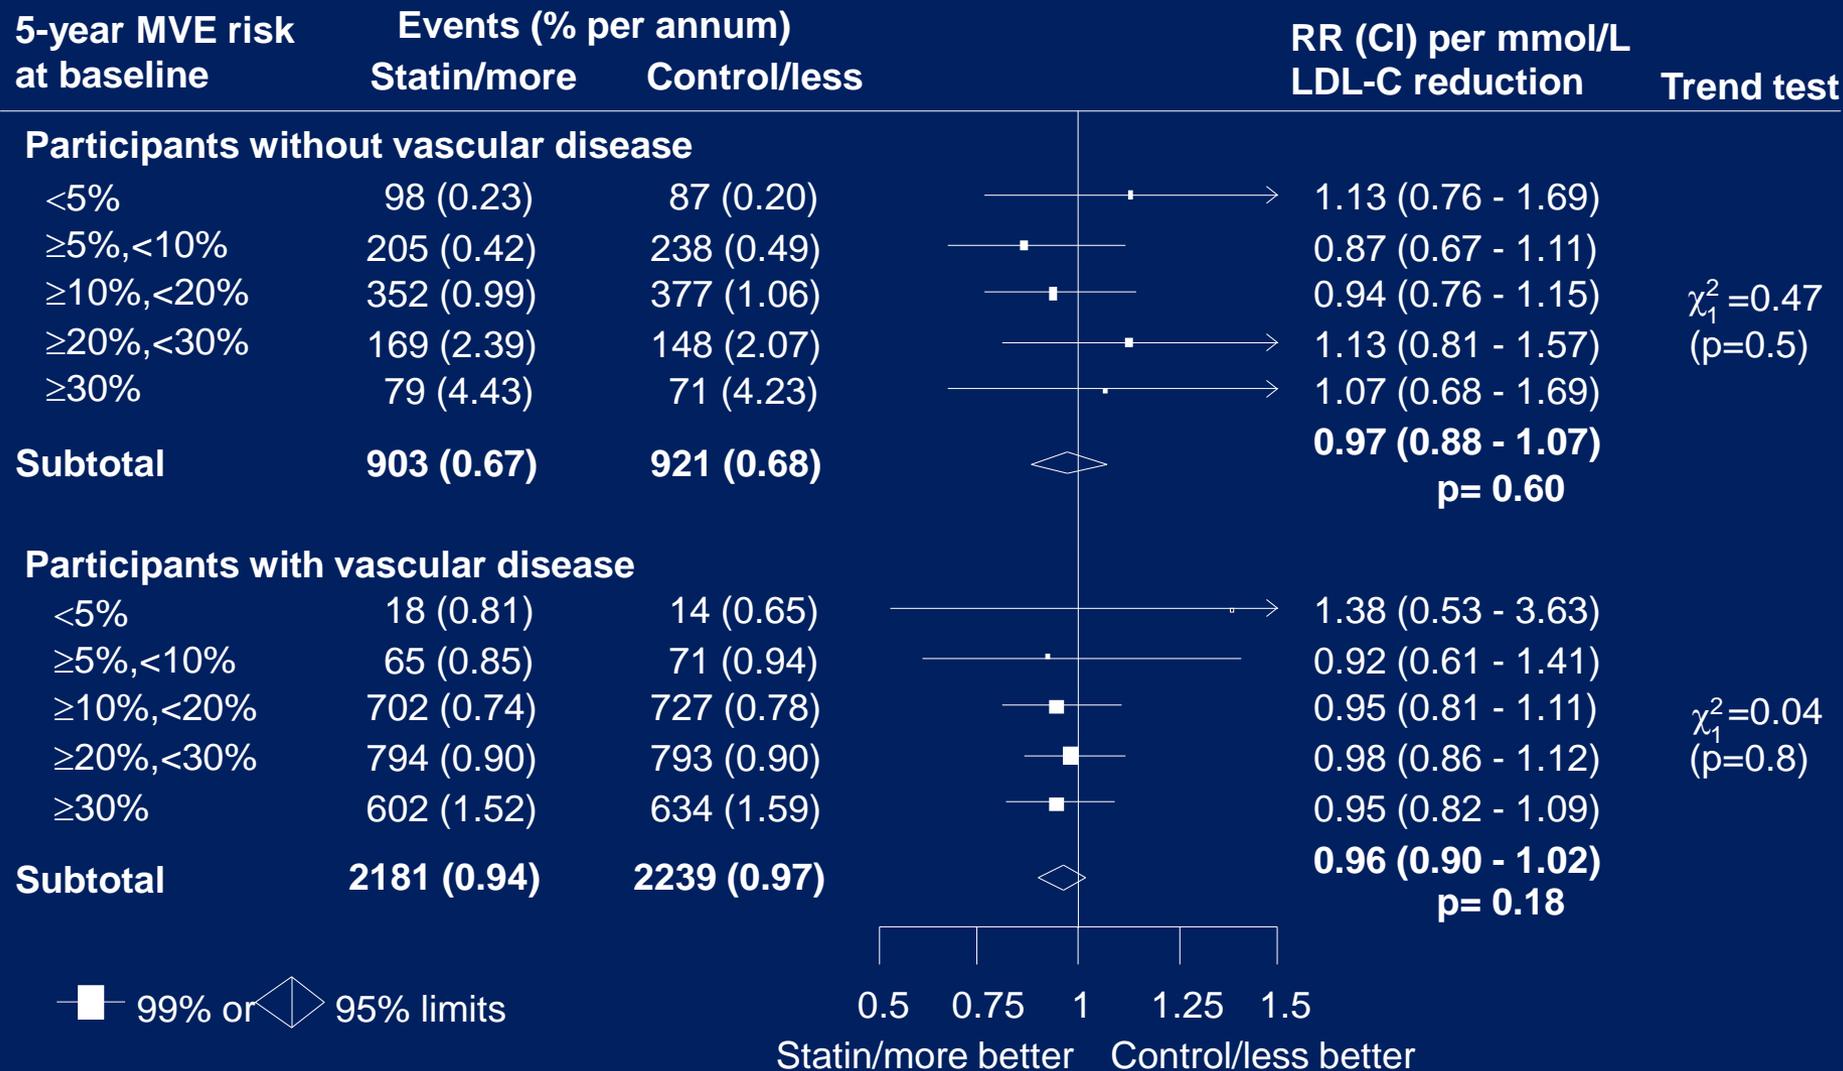

Effects on ANY VASCULAR DEATH per mmol/L LDL-C reduction, by history of vascular disease

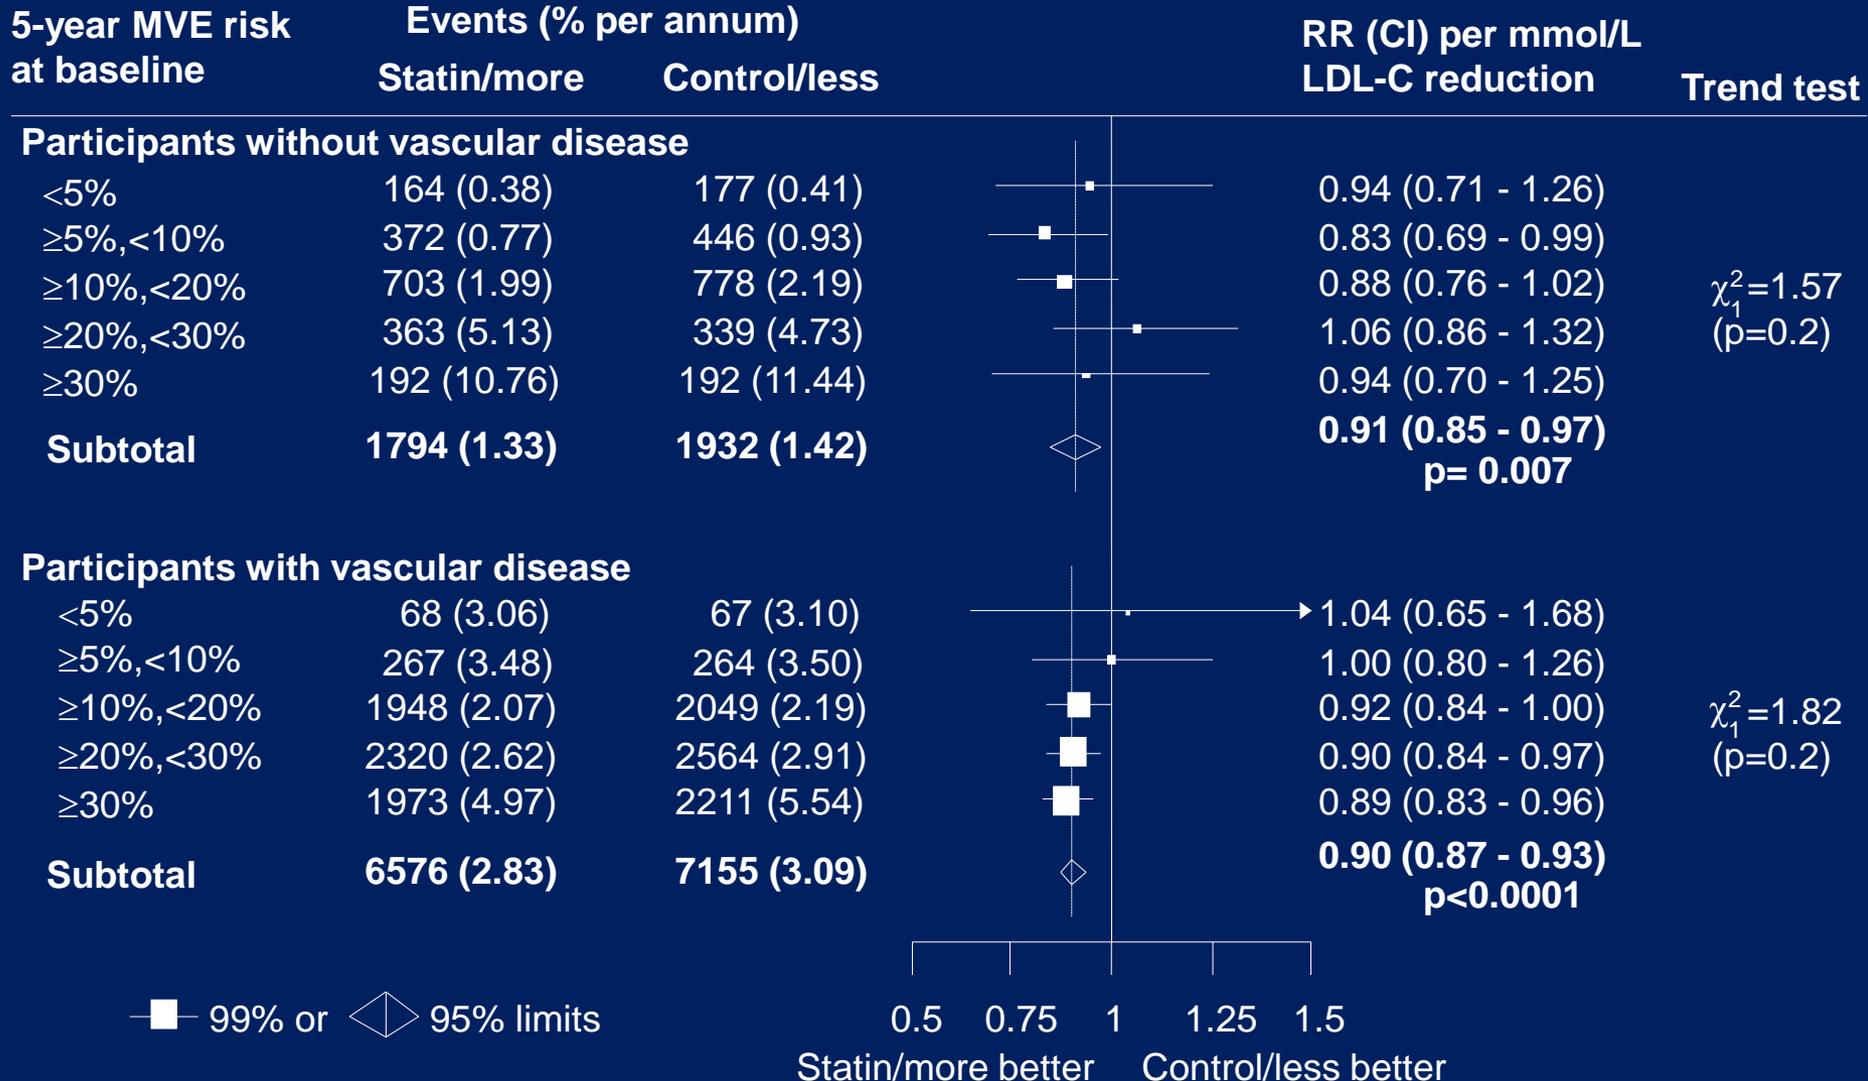

Heterogeneity between participants without and with vascular disease: $\chi^2_1=0.28$ (p=0.6)

Effects on NON-VASCULAR DEATH per mmol/L LDL-C reduction, by history of vascular disease

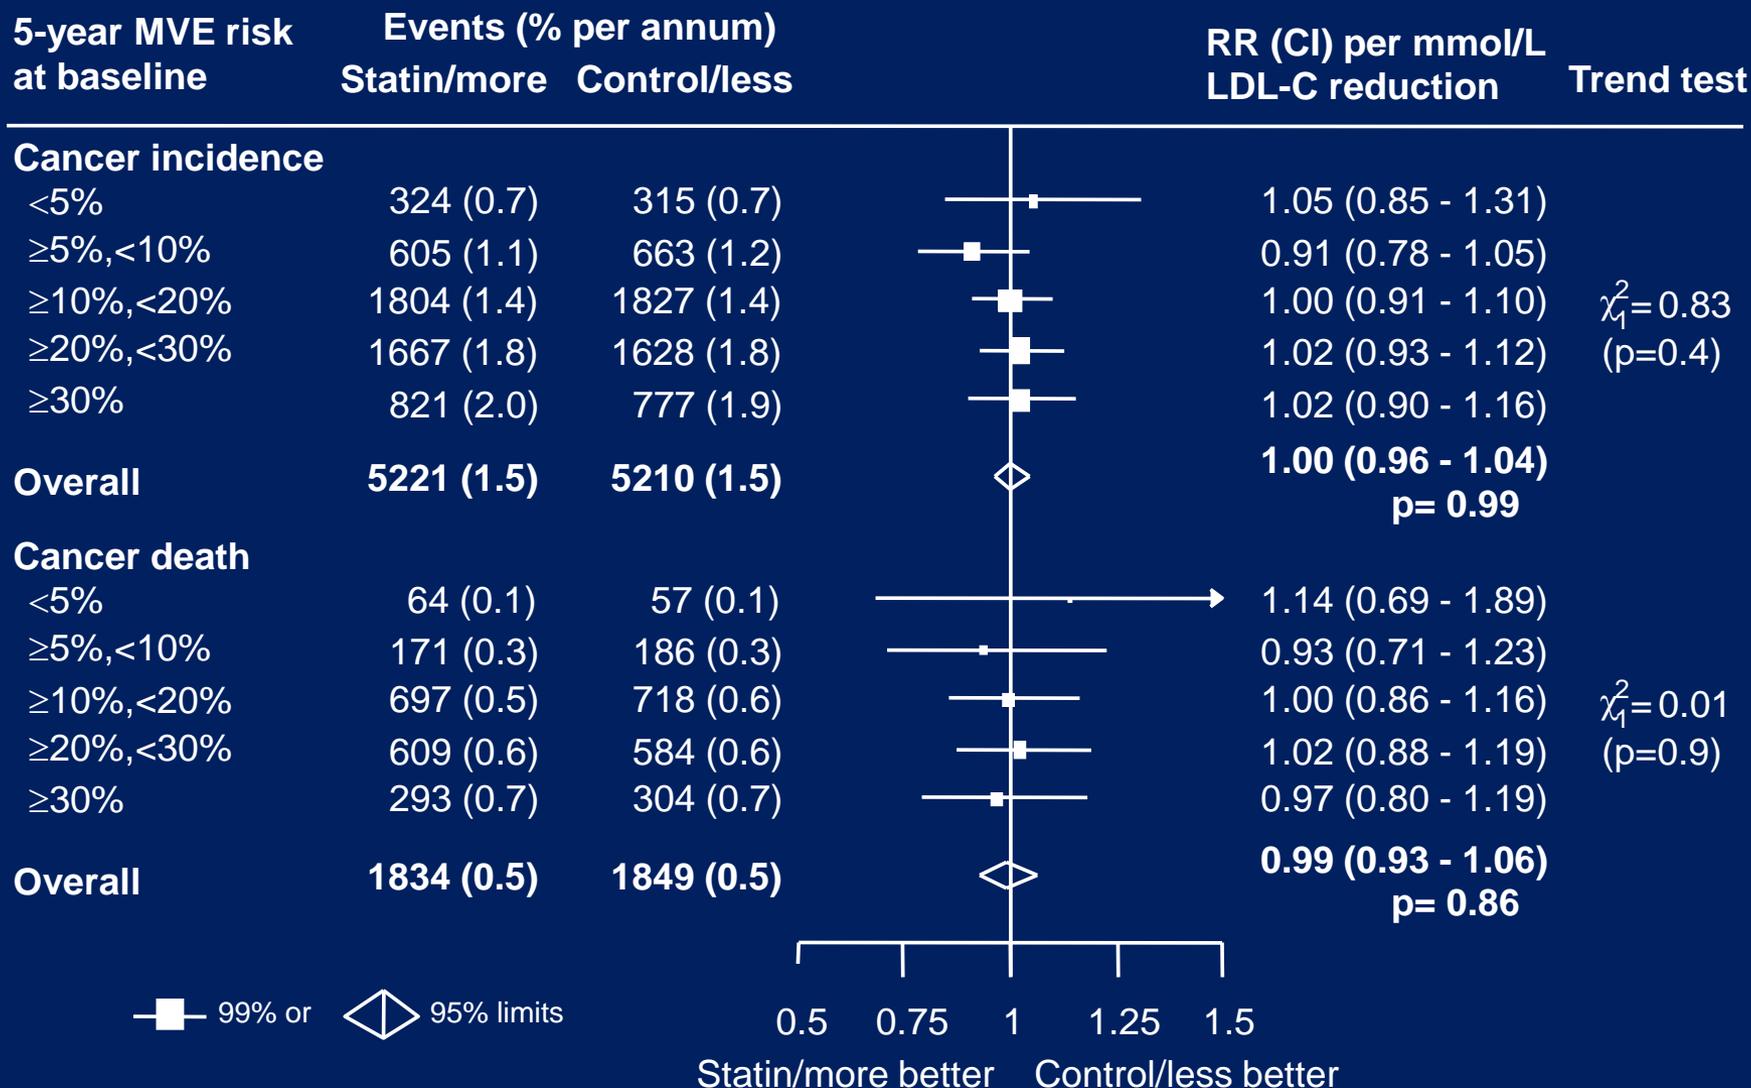

Heterogeneity between participants without and with vascular disease: $\chi^2_1 = 0.07$ (p=0.8)

Effects on ANY DEATH per mmol/L LDL-C reduction, by history of vascular disease

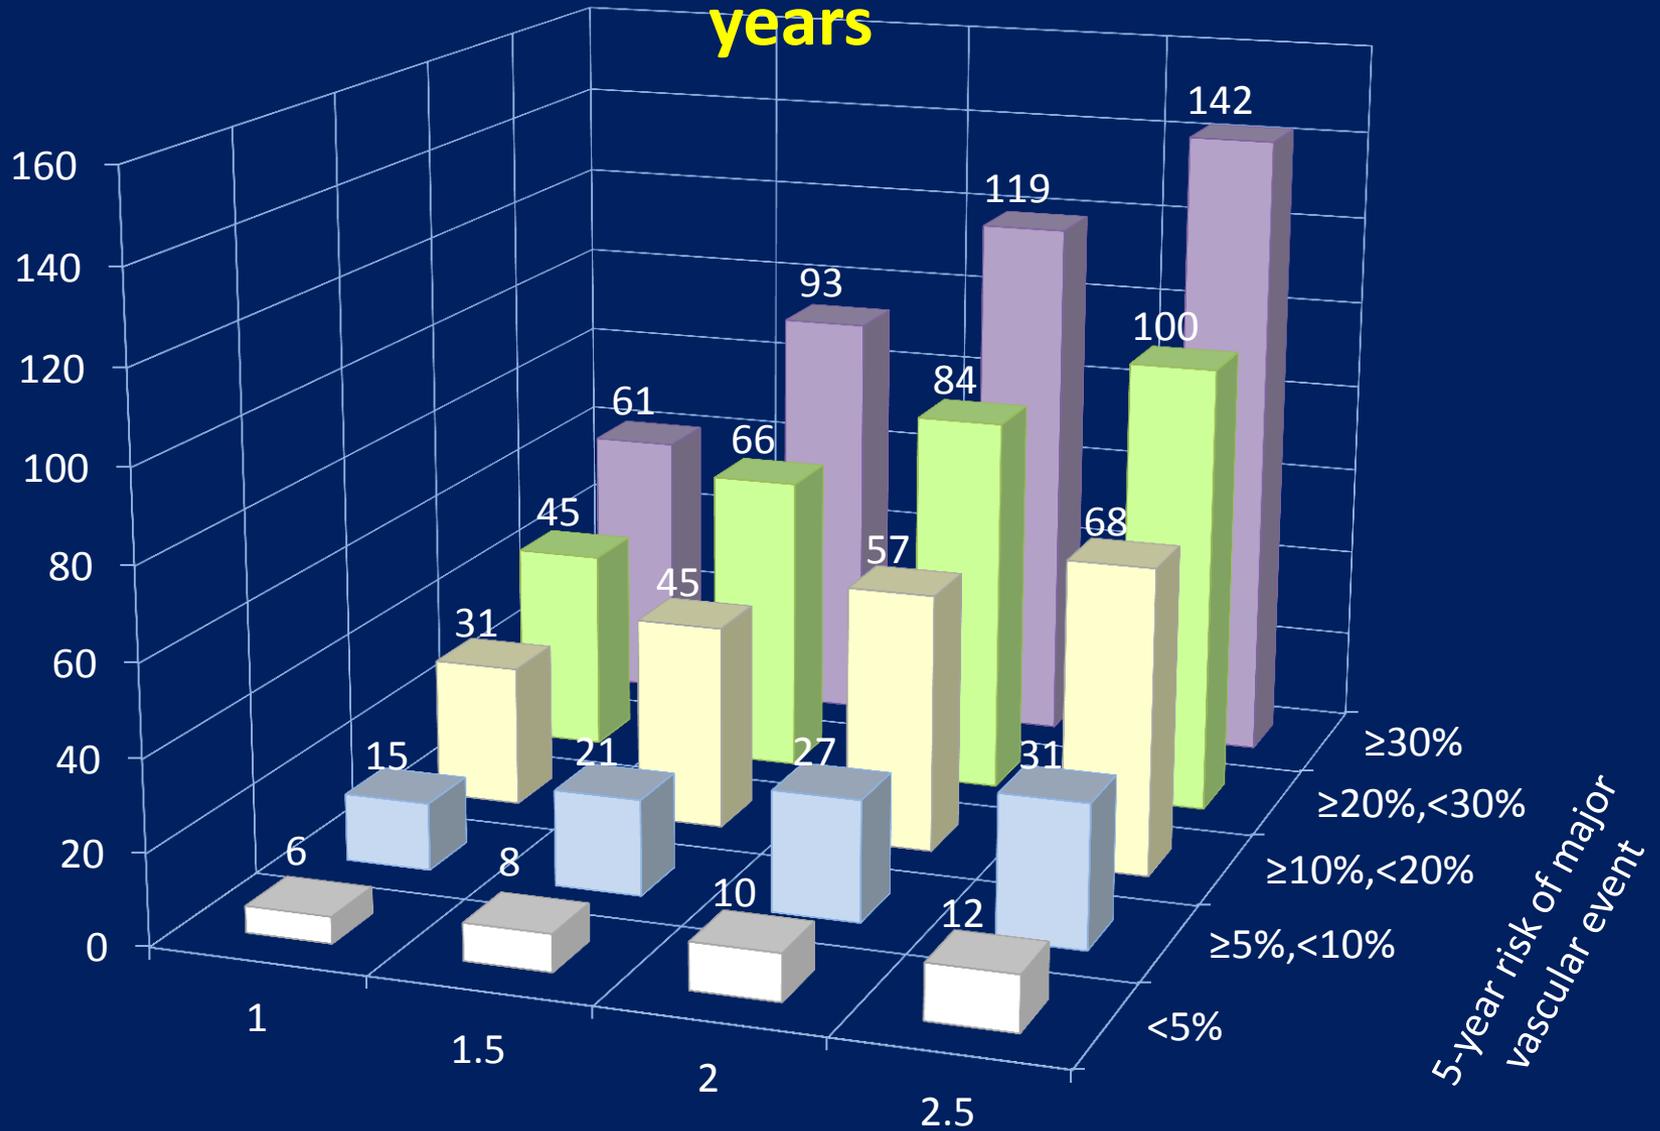

Heterogeneity between participants without and with vascular disease: $\chi^2_1=0.03$ (p=0.9)

Effects on CANCER INCIDENCE and CANCER MORTALITY per mmol/L LDL-C reduction

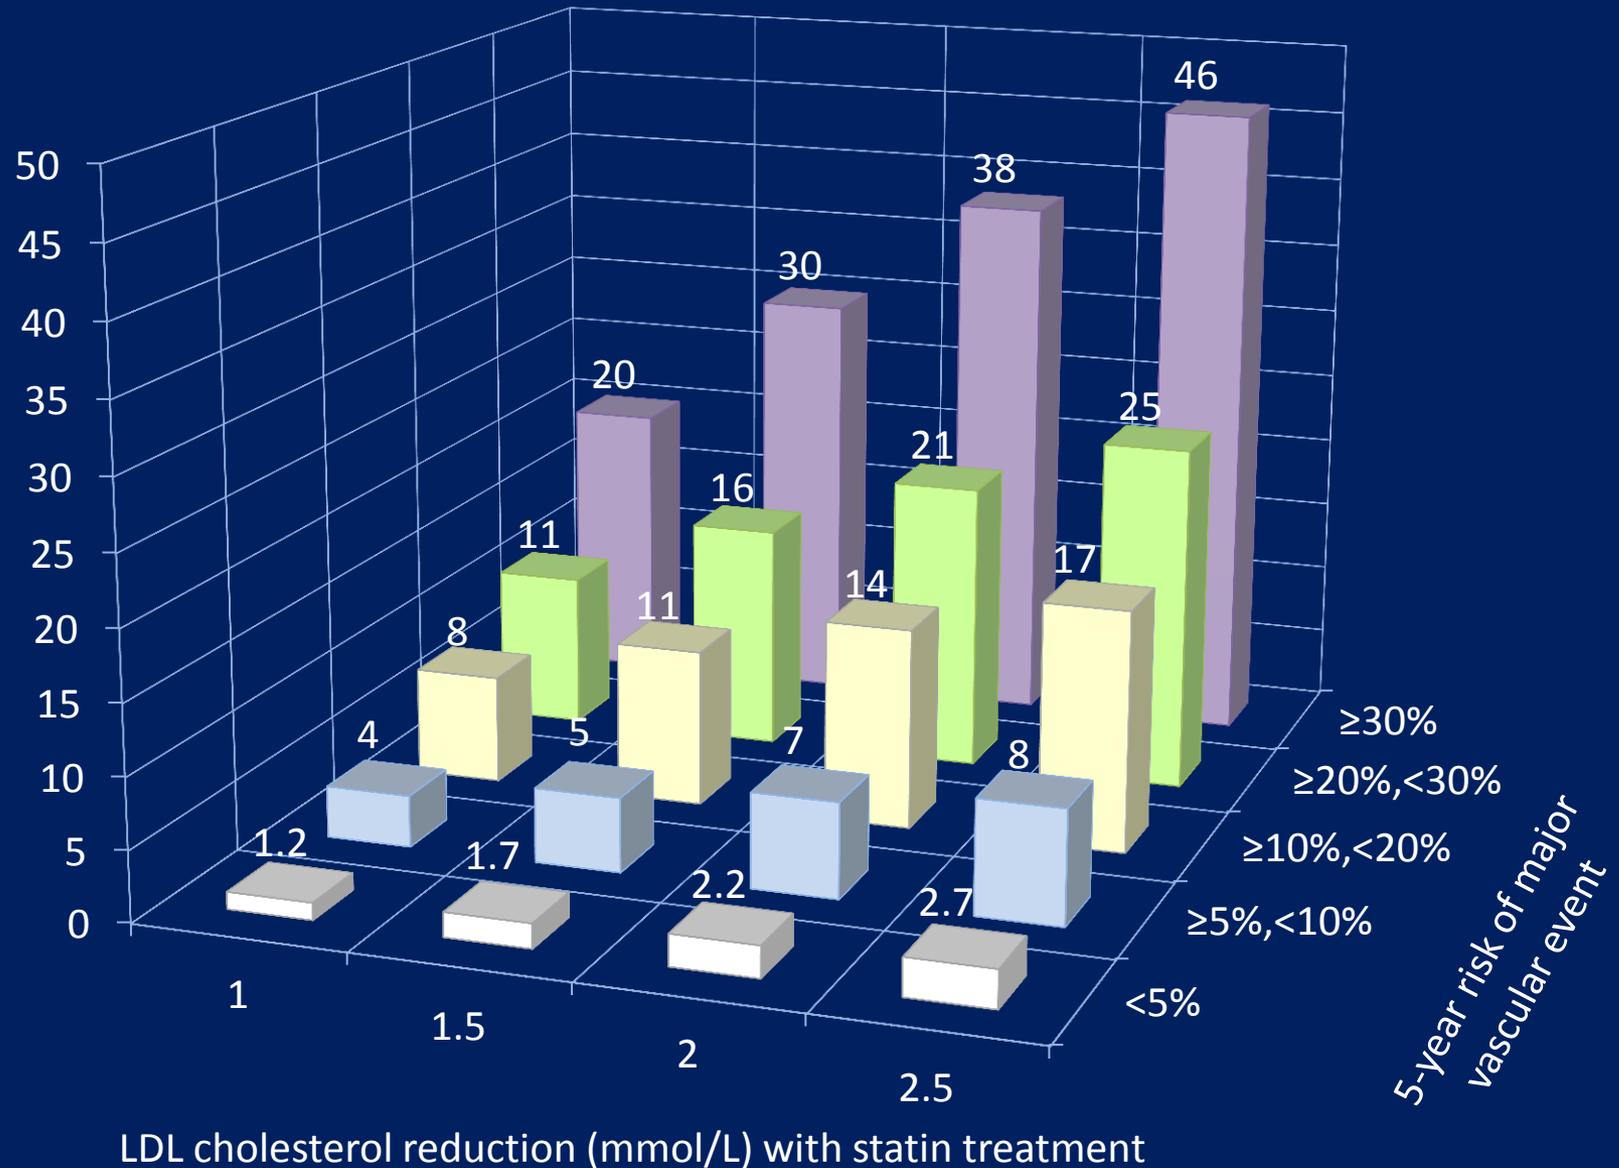

Major Vascular Events avoided per 1,000 treated over 5 years

LDL cholesterol reduction (mmol/L) with statin treatment

Vascular Deaths avoided per 1,000 treated over 5 years

Eligibility of CTT participants without a history of vascular disease for statin therapy under existing major guidelines (April 2012)

CTT risk category and event rates			Broad eligibility under current guidelines		
Estimated 5-year MVE risk	Observed MCE event rate (% per annum)*	Observed vascular death rate (% per annum)*	ATP-III ¹	ESC task force ²	NICE ³
<5%	0.2	0.1	×	×	×
≥5% to <10%	0.8	0.3	×	×	×
≥10% to <20%	1.6	1.0	✓	✓	✓
≥20% to <30%	3.2	2.3	✓	✓	✓
≥30%	5.6	5.8	✓	✓	✓

✓ Treatment with statin recommended.

× Treatment with statin not recommended.

CTT= Cholesterol Treatment Collaboration'. MVE= major vascular event. MCE= major coronary event.

* Among control-allocated participants without a history of vascular disease.

¹ The Adult Treatment Panel III (ATP III) of the National Cholesterol Education program in the US.

² The Fourth Joint Task Force of the European Society of Cardiology (ESC) and Other Societies on Cardiovascular Disease Prevention in Clinical Practice and the ESC/EAS Guidelines for the management of dyslipidaemias.

³ The National Institute for Health and Clinical Excellence (NICE) in the National Health Service (NHS) in England and Wales.
